### ORGANISATION OVERVIEW

Salt Story Studio produce and present educational workshops that harness innovative learning by connecting the arts with technology.

Our Education Series encompasses technology, performance and art, and each program in the series caters to children from early years to senior secondary and has been developed to encourage creative learning and inspire inquisitive young minds.

In addition to the Education Series, Salt Story Studio also produce film and online content, and offer creative consultation, and project development services.

### PROGRAM DESCRIPTION

Our Education Series offers three pre-developed programs:

**The Aquarium** – Children experience an underwater world of their own invention, enjoying games and art projects as they discover the weird and wonderful residents of our oceans.

**Reality Engineers** – Young people explore the worlds of storytelling, design and performance in this unique introduction to 360 degree film making and virtual reality.

**Video Rebels!** – Upper primary and high school students tell their stories in an engaging introduction to documentary making.

There is also a **Made to Measure** option, with the opportunity to work with Salt Story Studio's experts to create an engaging arts and technology experience tailored to support specific curriculum's, age groups and learning goals.

Ideal for schools, preschools, festivals, council and NGO initiatives, and child focused events, each program can be tailored to suit the available space and time frame, from one off workshops to term based series.

The programs are led by skilled artists and allow children to explore digital as well as traditional forms of art making in a hands on environment.
